Data Solutions Engineer

Created internal tools and data solutions to improve efficiency at Omega Point. Managed Client specific implementations and specific workflows via python and database solutions. Spoke with clients about feature improvements and updates. Communicated requirements between sales teams and development teams.

New York, NY (Remote)

October 2020- March 2021

Sumitomo Mitsui Banking Corporation

Cash Management Support/Technical Implementations

Provide training and technical support for customers on online banking systems, and associated sub systems. Manage new implementations of services. Train new employees. Coordinate complex implementations such as host to host services over SFTP. Review and test file specs, managed host to host and SFTP Transmission protocols for the bank. Test connectivity with client servers. Assist in format conversions for ERP systems such as SAP Idoc, XML, NACHA and BAI2. The most significant achievement during this period was creating VBA automation of manual processes to increase department efficiency including the following:

- Client Tracking System in VBA and SQL to help track cases and volumes across the department, and generated reports for management
- Form Generator which consolidated the documents saving the department time. Instead of preparing 5-10 forms per customer, we filled the information once, and populated across forms, and stored the information in a database. A form filling process that used to take 1-2 hours, it now takes 10 minutes per customer per service rep. Saving the company over 10,000 hours of work so far.
- File Format Validator which read and formatted text files to NACHA Specifications

New York, NY

October 2015- October 2020

Crowquetica Games

Software Engineer

Worked as a systems engineer for the Kickstarter project, Developed Data storage, Item Systems, Internal tools and a database system for the Game. It was made using C# and Javascript on Unity, Serialization was done with JSON objects and custom data tables. Used SourceTree and GitHub to track project.
